Analysis and Design Database Customer Sales Order for PD. Lingga Harapan

Suryanto 1200964094

Abstract

Objective of this thesis is to build ordering database system for marketing division at PD. Lingga Harapan. The system purposed for help to reducing operator and sales process time and useless activity. Using new system will eliminate the unclear information, time to input data, modifying data and distribute delivery.

Method for solve the problem is by creating user friendly web system that allow operator to grand some privilege to sales, the idea to let sales to view the detail order they need to distribute without need operator to contact sales using walkie-talkie.

Result of this thesis is the system fully created and can fully function. They system then will be used and prove to be useful by operator and sales.

Conclusion for this thesis will built specially for PD. Lingga Harapan marketing division that proven to be able to overcome company current problem that faced by operators.

Key Words: Web Database, Information System, Internet
