Abstract

Objectives To know the financial ratio of a company after the crisis, and whether the crisis is affecting the performance of the sector or not.

Method The method used in the data collection of this research is observation through the companies’ financial report.

Results The study shows a decreasing in the liquidity, and activity ratio for the mining sector. And for the profitability and leverage ratio, it shows an increment. While for the financial sector, all ratios show a declining. On the contrary, the statistic view shows that all ratios have the same mean except debt-asset ratio for mining companies, and ROA, debt-equity, and debt-asset ratio for the financial companies.

Conclusion In mining companies, the liquidity, activity ratio showed declining in crisis period. And for the leverage ratio and the profitability ratio (ROA and ROE) showed an increments. In mining sector, the liquidity, profitability and leverage ratio showed declining in crisis period. On the other hand, from the statistical view, the financial ratio before and after the crisis in the same except debt-asset ratio for mining companies, and ROA, debt-equity, and debt-asset ratio for the financial companies.
